Claim 1; Page 12; 15pp; German.
The present peptide is a framgent of the human 65 kD glutamine decarboxylase (GAD), which can be used to diagnose, or diagnose a predisposition to, a tumnour or immunological disease, preferably an autoimmune disease, especially diabetes. It can also be used as a reagent to determine specific T cell subpopulations, in medicaments to treat or prevent immunological diseases, preferably autoimmune diseases, especially diabetes, to produce antigens, especially immunogens or tolerogens and to isolate specific T cell subpopulations, which can be used to produce antigens or for reinjection, optionally after inactivation. Of mutoireactive substances involving intradermal admin. Of mutoireactive substances Claim 11; Page 9; 12pp; German.

W18842-70 are peptide fragments of the 65 kD human glutamic acid decarboxylase (GAD). The fragments are autoreactive substances used for diagnosis of insulin-dependent diabetes mellitus (IDDM). The diagnosis is determined by using a claimed method for diagnosis of cell-mediated diseases. Which is effected by administering an autoreactive substance intradermally and establishing the diagnosis on the basis of the occurrence or lack of a positive reaction at the site of administration. The method is used for diagnosis of autoimmune and tumour diseases, preferably T-cell-mediated diseases such as rheumatoid arthritis, multiple sclerosis and especially IDDM.
65 kD Glutamic acid decarboxylase peptide fragment I. Ash. 65 kD; human; glutamic acid decarboxylase, autoreactive; diagnosis; insulin-dependent diabetes mellitus; IDDM; cell-mediated disease; predisposition; autoimmune; tumour; rheumatoid arthritis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 of MICA4/MICA6, but not those having the specificity of MICA1/MiCA3 or MICA2. These mutants also have some N-terminal modifications to improve solubility.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New soluble fragments of glutamic acid decarboxylase protein - used for the diagnosis and treatment of insulin dependent diabetes mealitus and stiff man syndrome.

Disclosure: Fig. 1; 73pp; English.

The amino acid sequences of human GAD65 (R59516) and rat GAD65 (R59517) were determined. New soluble fragments of GAD65 (R59518-25) were prepared by deletion/substitution mutagenesis. The C-terminally deleted mutants given in R59524-25 are able to recognize IDDM autoantibodies having the specificity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           mutagenesis. These fragments are free of N-terminal amino acids that limit solubility. Different fragments contain epitopes for different classes of GAD65 autoantibodies.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                diabetes and stiff man syndrome
Examples: Fig 1: 31pp; English.
This represents a human GAD65 protein sequence. The invention provides soluble fragments of GAD65 that are specifically reactive with at least one class of GAD65 autoantibody. The fragments are substantially free of N-terminal amino acids that would otherwise limit solubility. Different fragments contain different epitopes for different classes of GAD65 autoantibodies. These fragments are used in the methods of the invention for detection of GAD65 autoantibodies. The methods are used for diagnosing or monitoring insulin-dependent diabetes mellitus (IDDM) and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              22-FPB-1999 (first entry)
Human GAD65 protein sequence.
GAD65; autoantibody; soluble; detection; diagnosis; monitor; IDDM; insulin-dependent diabetes mellitus; stiff man syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 94.200133/24.

New soluble fragments of glutamic acid decarboxylase protein - used for the diagnosis and treatment of insulin dependent diabetes mellitus and striff man syndrome.

Disclosure: Fig. 1; 73pp; English.

The amino acid sequences of human GAD65 (R59516) and rat GAD65 (R59518-25) were determined. New soluble fragments of GAD65 (R59518-25) were prepared by deletion/substitution mutagenesis. These fragments are free of N-terminal amino acids that limit solubility. Different fragments contain epitopes for

Stiff-man syndrome
Disclosure; column 27-30; 30pp; English.
This sequence represents the human glutamic acid decarboxylase protein
This sequence represents the human glutamic acid decarboxylase protein
This sequence represents the human glutamic acid decarboxylase protein
This sequence represents the human glutamic of a GAD65 protein that
are specifically reactive with a GAD65 autoantibody (AAb), where the
fragment is at least 99 pure and the AAb binds to a conformational
epitope of the fragment. The soluble GAD65 fragments can be used to
distinguish between insulin-dependent diabetes mellitus (IDDM) and stiff
man syndrome. They can also be used for diagnosts and treatment of IDDM
and stiff man syndrome. The fragments can distinguish different temporal
                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             οy
                                                                                                                                                                                    for ameliorating auto-immune responses.

Since an expression to the pance of the central nervous system. There are two bisclosure: Fig 1: 28pp; English.

This sequence represents the 65 kD isoform of human glutamic acid decarboxylase (GAD65). GAD is an enzyme expressed in the beta cells of the pancreas, and in neurons of the central nervous system. There are two considerates of the interpretation of the central nervous system. There are two GAD65 have been identified in Type I diabetic patients. Fragments of GAD65, and analogues of the fragments, are used in the methods of the invention. The methods are for detecting or treating diabetes or a predisposition to diabetes. The peptides can also be used for ameliorating an autoimmune response in a patient. Alteration of the native peptides with selective changes of crucial residues can induce the interpretation of the responsiveness of antispen specific autoreactive T cells. The peptide analogues compete for binding to MHC concerned to the corresponding native peptide seasons.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modified glutamic acid decarboxylase for autoimmune disease treatment - has immunoreactivity of unmodified GAD65 but decreased enzyme activity, esp. useful for insulin-dependent diabetes mellitus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Amodified human glutamic acid decarboxylase (GAD) (W14915) has the native lysine residue at amino acid position 396 replaced by arginine. It is obtd. by site-directed mutagenesis (see also T64550) of native human GAD65 cDNA and expression of the mutant DNA activity. By replacing it with an amino acid incapable of Schiff base formation, immunoreactivity is maintened by Schiff is reduced or lost, so minimising the risk of toxicity. The modified GAD can be used to treat and/or prevent autoimmune
                                                                                                              New human glutamic acid decarboxylase peptide(s) - used for treatment, diagnosis and determining predisposition to diabetes and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              disorders such as insulin-dependent diabetes mellitus (IDDM) and other diseases, e.g. neurological diseases, esp. in individuals having a genetic predisposition for IDDM or with an increased antibody titre against GAD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified glutamic acid decarboxylase (K396R). Glutamic acid decarboxylase; of ADL; autoimmune disease; therapy; indulin-dependent diabetes mellitus; vaccine; engineering; protein engineering.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 585;

Disclosure; Fig 2, 45pp; English.

The sequence is that of human pancreatic islet glutamic acid decarboxylase (GAD) which is used to test biological samples for the presence of autoantibodies to human GAD. It can also be used to remove antibodies against GAD from plasma in order to treat an autoimmune response to GAD, e.g. in insulin-dependent diabetes melting (IDDM), and may also be used to induce immunological tolerance to GAD by giving GAD that specifically binds the GAD receptor on immature I
                                                                                                                                                            20-APR-1993 (first entry)
Human pancreatic islet cell glutamic acid decarboxylase.
GAD; insulin dependent diabetes melting; IDDM; autoantibody detection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                    Polynucleotide encoding human islet glutamic acid decarboxylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Disclosure; Fig. 1; 73pp; English.
The amino acid sequences of human GAD65 (R59516) and rat GAD65 (R59517) were determined. New soluble fragments of GAD65 (R59518-25) were prepared by deletion/substitution mutagenesis. These fragments are free of N-terminal amino acid that limit solubility. Different fragments contain epitopes fo sequence 585 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New soluble fragments of glutamic acid decarboxylase protein used for the diagnosis and treatment of insulin dependent diabetes mellitus and stiff man syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score 146; DB 1; Length 585;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               claim 1: Page 16-18: 24pp; English.
A modified human glutamic acid decarboxylase (GAD) (W14915) has the native Lys residue at amino acid position 36 replaced by 11e, Gln, H1s, Gly or esp. Arg (see also W14915). It is obtd. by sitedirected mutagenesis of native human GAD65 cDNA and expression of
    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            diagnosis and treatment of auto: immune disease, esp. insulin dependent diabetes, also related nucleic acid, vectors, antibodies, hybridoma(s) etc.

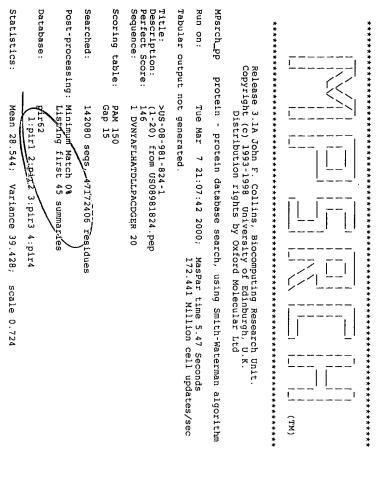

Sample 1; Fig 3; 100pp; English.

O86481 and O86482 encode R71733 and R79105, rat and human glutamic acid decarboxylase (GAD65) respectively, from which the GAD65 fragments described in R72261-R72298 were derived. These fragments can be used to detect autoantibodies against GAD, e.g. to diagnose and treat GAD-related autoimmune disorders, such as insulin dependent diabetes mellitus or stiff man disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    10-JUL-1997 (first entry) Modified glutamic acid decarboxylase. Glutamic acid decarboxylase. Glutamic acid decarboxylase; GAD: autoimmune disease; therapy; indulin-dependent diabetes mellitus; vaccine; enzyme englneering; protein engineering.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 8: Page 40-44; 62pp; English.
A human islet cDNA library was screened for colonies containing GAD CDNA using probes (given in 086047-49) based on conserved internal and N- and C-terminal regions of cat, rat and mouse brain GAD. Full-length clones were obtained by PCR-RACE. The entire sequence of the human islet GAD cDNA is given in 086046 and the encoded protein in R71641. GAD was used to screen sera for the presence of GAD autoantibodies.
the mutant DNA in transformed host cells. Lys-396 is critical for enzyme activity. By replacing it with an amino acid incapable of Schiff base formation, immunoreactivity is maintained but enzyme activity is reduced or lost, so minimising the risk of toxicity. The modified GAD can be used to treat and/or prevent autoimmune disorders such as insulin-dependent diabetes mellitus (IDDM) and other diseases, e.g. neurological diseases, esp. in individuals having a genetic predisposition for IDDM or with an increased antibody titre against GAD.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        GAD; glutamic-acid-decarboxylase; glutamate-decarboxylase;

This enzyme (GAD) catalyzes the formation of an inhibitory
neurotransmitter, gamma-aminobutyric acid, from L-glutamic acid;
it has several isoforms, each encoded by a separate gene. GAD has
also been implicated as an autoantigen in autoimmune disease

This enzyme (GAD) catalyzes the formation of an inhibitory
neurotransmitter, gamma-aminobutyric acid, from L-glutamic acid;
it has several isoforms, each encoded by a separate gene.
TION #superfamily human glutamate decarboxylase
carbon-carbon lyase; carboxy-lyase; phosphoprotein; pyridoxal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            #superfamily protein-tyrosine-phosphatase, receptor type
PTP69D; fibronectin type III repeat homology;
immunoglobulin homology; leukocyte common antigen cytosolic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         protein-tyrosine-phosphatase (EC 3.1.3.48), receptor typ profesp precursor - fruit fly (prosophila melanogaster) protein-tyrosine-phosphatase DPTP #formal_name Drosophila melanogaster 10.Sep-1999 #sequence_revision 10-Sep-1999 #text_change

MPsrch_pp Run on: protein - protein database search, using Smith-Waterman algorithm Tue Mar 7 21:02:37 2000: MasPar time 3.45 Seconds 173.144 Million cell updates/sec

Tabular output not generated.

Description: Perfect Score: Title: >US-08-981-824-1 (1-20) from US08981824.pep 146

Sequence: 1 DVNYAFLHATDLLPACDGER 20

Scoring table: PAM 150 Gap 15

Searched: 82229 segs, 29864866 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 29.144; Variance 36.336; scale 0.802

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Two genes encode distinct glutamate decarboxylas

"Two genes encode distinct glutamate decarboxylas

"Legrand 7:91-100(1991).

"I FUNCTION: CATALYZES THE PRODUCTION OF GABA.

"I CATALYTIC ACTIVITY: L-GLUTAMATE - 4-AMINOBUTA

"I COFACTOR: PYRIDOXAL PHOSPHATE.

"I SUBUNIT: HOMODIMER (BY SIMILARITY).

"I SIMILARITY: LOCAL TO DOPA DECARBOXYLASE, AND DECARBOXYLASE.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DCE2_RAT STANDARD; PRT; 585 AA.

FUNCTION: IT IS POSSIBLE THAT DPTP IS A CELL ADHESION RE
CATALYTIC ACTIVITY: PROTEIN TYROSINE PHOSPHATE + H(2)O -
PROTEIN TYROSINE + ORTHOPHOSPHATE.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SIMILARITY: EXTRACELLULAR REGION TYPIC OF A CAM FAMILY (
LIKE DOMAINS FOLLOWED BY 2 FIBRONECTIN TYPE III-LIKE DOM

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    O/-KUA GAD).";

Gene 152:257-260(1995).

-i- FUNCTION: CATALYZES THE PRODUCTION OF GABA.

-i- CATALYTIC ACTIVITY: L-GLUTAMATE. = 4-AMINOBUTANO

-i- COFACTOR: PYRIDOXAL PHOSPHATE.

-i- SUBUNIT: HOMODIMER (BY SIMILARITY).

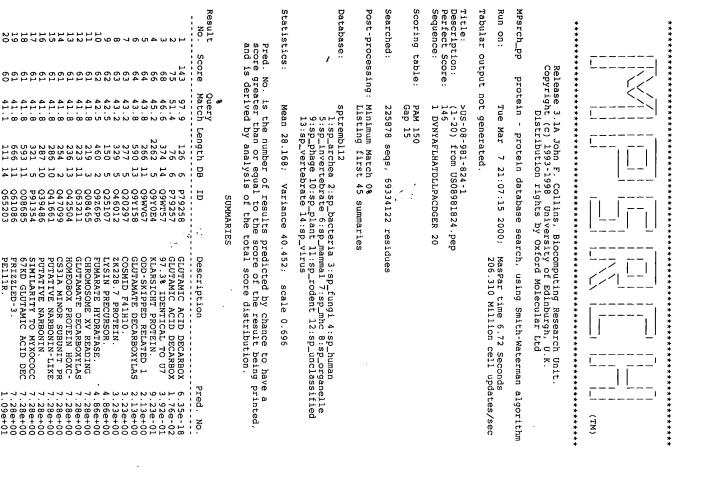

-i- SIMILARITY: BELONGS TO GROUP II DECARBOXYLASES
                                                                                                                                                     This SWISS-PROT entry is copyright.
